Supplementary Fig. 2. Opposed-phase images. (a) repetition time, 2000 ms; echo time, 29 ms. (b) repetition time, 2000 ms; echo time, 67 ms. (c) repetition time, 4000 ms; echo time, 67 ms. Other MR parameters were identical as follows: field of view, 16 cm; echo train length, 7; bandwidth, 50; and slice thickness, 4 mm. The India ink artifact encircling the macroscopic fat of pork meat was thicker with shorter echo time (thicker in a than b), without significant differences at different repetition times (b and c).
