Supplementary Fig. 4. Opposed-phase images. Echo train lengths were as follows: 2 in (a) 3 in (b) and 7 in (c). Other MR parameters were the same as follows: repetition time, 400 ms; echo time, 10 ms; field of view, 8 cm; bandwidth, 50; and slice thickness, 4 mm. The India ink artifact enclosing the macroscopic fat of the pork meat was thicker with larger echo train length.
